### (54) PRODUCTION OF RESINOUS SUBSTANCE FROM WOODY SUBSTANCE AND PHENOLS BY USING SOLVENT

(57)Abstract:

PURPOSE: To obtain a resinous viscous liquid free from foaming, blowdown, etc., at high reaction rate, in high yield in chemically reacting solid fine pieces of woody substance with a phenol by adding a specific liquid substance to a reaction system.

CONSTITUTION: In producing a resinous viscous liquid by chemically reacting solid fine pieces of woody substance with a phenol, a liquid substance (e.g. tetralin, xylene or toluene) which is not reacted with the woody substance, well miscible with phenol, becomes a uniform liquid and yet is capable of dissolving the formed resinous reaction product is added to the reaction system.
